

## SAMPLING REPORT

**SITE NAME:** Cornell – Dubilier Electronics Site  
DCN No.: RST 2-02-F-0437  
TDD No.: TO-0007-0115

**EPA SITE I.D. NO.:** GZ

**SAMPLE DATES:** December 10 – 27, 2007, January 7-9, 2008

**1. Site Location:** 333 Hamilton Boulevard  
South Plainfield, Middlesex County, New Jersey  
(Refer to Attachment A, Figure 1)

**2. Sample Locations and Descriptions:** Refer to Attachment A, Figure 1-5, Sample Location Maps and Attachment B, Table 1– Sample Collection Information and Attachment D, Table 2 – Locational Data

**3. Laboratories Receiving Samples:**

Sample Matrix	Analyses	Laboratory
Surface Water	TLC PCBs Modified MA1508	Mitkem Corporation 175 Metro Center Blvd. Warwick, RI 02886 (401) 732-3400
Rinsate	TCL PCBs	
Soil	TCL PCBs	
Sediment	TCL PCBs	
Rinsate	TCL PCBs	Shealy Environmental Services 106 Vantage Point Drive West Columbia, SC 29172 (803) 791-9700
Soil	TCL PCBs	
Sediment	TCL PCBs	

**4. Sample Dispatch Data:**

On December 10, 2007, 13 surface water samples were shipped to Mitkem Corporation for PCBs (Modified MA1508) analysis under FedEx Airbill No. 8641 2354 5830 by RST 2 personnel.

On December 11, 2007, 46 soil and sediment samples including two duplicate samples and one rinsate sample were shipped to Shealy Environmental Services for PCBs analysis under FedEx Airbill No. 8641 2354 5808 by RST 2 personnel.

On December 12, 2007, 59 soil and sediment samples including four duplicate samples and one rinsate sample were shipped to Shealy Environmental Services for PCBs analysis under FedEx Airbill No. 8641 2354 5782 by RST 2 personnel.

On December 13, 2007, 9 surface water samples including one duplicate were shipped to Mitkem Corporation for PCBs (Modified MA1508) analysis under FedEx Airbill No. 8641 2354 5819 by RST 2 personnel. In addition, 12 soil and sediment samples were shipped to Shealy Environmental Services for PCBs analysis under FedEx Airbill No. 8641 2354 5793 by RST 2 personnel.

On December 14, 2007, 9 soil and sediment samples and one rinsate sample were shipped to Shealy Environmental Services for PCBs analysis under FedEx Airbill No. 8617 2879 6799 by RST 2 personnel.

On December 18, 2007, 61 soil and sediment samples including three duplicate samples and one rinsate sample were shipped to Shealy Environmental Services for PCBs analysis under FedEx Airbill No. 8617 2879 6777 by RST 2 personnel.

On December 19, 2007, 50 soil and sediment samples, 12 water samples including three duplicate samples, and one rinsate sample were shipped to Mitkem Corporation for PCBs analysis under FedEx Airbill No. 8641 2354 5820 by RST 2 personnel.

On December 20, 2007, 57 soil and sediment samples including three duplicate samples and one rinsate sample were shipped to Mitkem Corporation for PCBs analysis under FedEx Airbill No. 8617 2879 6928 by RST 2 personnel.

On December 27, 2007, 14 surface water samples including one duplicate sample were shipped to Mitkem Corporation for PCBs (Modified MA1508) analysis under FedEx Airbill No. 8617 2879 6940 by RST 2 personnel.

On January 7, 2008, 71 soil and sediment samples including three duplicate samples and one rinsate sample were shipped to Mitkem Corporation for PCBs analysis under FedEx Airbill No. 861728796847 by RST 2 personnel.

On January 8, 2008, 44 soil and sediment samples including four duplicate samples and one rinsate sample were shipped to Mitkem Corporation for PCBs analysis under FedEx Airbill No. 861728796870 by RST 2 personnel.

On January 9, 2008, 21 soil and sediment samples including one duplicate sample and one rinsate sample were shipped to Shealy Environmental Services for PCBs analysis under FedEx Airbill No. 861728797100 by RST 2 personnel.

For further details, refer to the Chain of Custody Records and FedEx Airbills in Attachment C.

## 5. On-Site Personnel:

<u>Name</u>	<u>Representing</u>	<u>Duties on Site</u>
Nicholas Magriples	U.S. EPA	On-Scene Coordinator
Shawna Rigby	U.S. EPA	On-Scene Coordinator
John Brennan	Region II RST 2	Site Project Manager, Site QA/QC, Site Health and Safety, Sample Collection and Management, Locational Data Collection
Matthew Foster	Region II RST 2	Sample Collection and Management, Locational Data Collection
Jeffrey Jager	Region II RST 2	Sample Collection and Management, Locational Data Collection
Kelly Scott	Region II RST 2	Sample Collection and Management, Locational Data Collection
Sayad Iqbal	Region II RST 2	Sample Collection
Sandra Richards	Region II RST 2	Sample Management, Locational Data Collection

## 6. Investigation Summary:

The goal of this sampling event was to recreate a portion of the 1997 sampling event, in which, EPA and Weston Solutions under the Region II Superfund Technical Assessment Response Team (START) contract collected sediment and soil samples along a 2.4 mile reach of the Bound Brook. Laboratory data was analyzed in order to determine if there had been any changes in the PCB concentrations since the 1997 sampling event.

## 7. Investigation Review and Methodology:

### 7.1 Sample Collection

RST 2 collected sediment, soil, and surface water samples at 50 foot intervals from forty-four (44) transects along a half-mile stretch of the Bound Brook. Sediment and soil samples were obtained from the center of the stream bed and from two locations along the north and south banks of the Bound Brook, approximately five feet and ten feet from the edge of the water (0-6 inch and 18-24 inch sample depths) at each transect. Surface water samples were collected from the center of the stream at each location. At each transect, surface water samples were collected first followed by the sediment samples and then the soil samples to prevent possible cross-contamination. However, in Reach 1 many of the soil samples were collected before the sediment samples to allow additional time for the Bound Brook water levels to recede.

One surface water sample was collected from each of the 44 transects. Surface water samples were named starting with the alphabetic identification of the transect from the 1997 sampling event

followed by the word “water”. Field duplicate samples were named using the sample ID followed by an “A”. At each sample location, RST 2 dipped two glass jars into the surface water and slowly collected the water until full. The surface water samples were collected before the sediment samples at each location to avoid collecting any suspended solids that may have entered the water column. In addition, surface water samples were collected in a downstream to upstream fashion to avoid similar cross-contamination. All surface water samples were analyzed for PCBs using Modified analysis MA1508 with a 21-day written turnaround time. Each surface water sample was filtered at the laboratory to remove any suspended solids that may have entered the sample during collection. For more details see Table 1B, Attachment B.

A maximum of two sediment samples were collected from each of the 44 transects. Sediment samples were named starting with the alphabetic identification of the transect from the 1997 sampling event, followed by “SED” to indicate a sediment sample. This was followed by “S” for shallow (0-6 inches) or “D” for deep (18-24 inches). At some sample locations, it was not possible to reach the target depth of 18-24 inches due to shallow bedrock or rock deposits located below the stream bed. At these locations, RST2 collected the deepest achievable 6-inch interval. At other locations, refusal prevented the collection of any deep sediment samples. Field duplicate samples were named using the sample ID followed by an “A” at the end. Both shallow and deep sediment samples were collected using decontaminated augers. However, in some cases, dedicated 36-inch plastic liners were used to collect the shallow sediment samples, especially in Reach 1. Originally, RST 2 planned to collect both the shallow and the deep sediment samples using a hand corer equipped with the dedicated 36-inch plastic liners. However, the hand corer could not penetrate the sediments to an acceptable depth. Once samples were collected, they were homogenized in dedicated aluminum pans with a dedicated plastic scoop before being placed into glass sample jars. Samples were collected in a downstream to upstream fashion to prevent possible cross-contamination. All sediment samples were analyzed for PCBs with a 21-day written turnaround time. For more details see Table 1A, Attachment B.

Soil samples were collected from four locations at each of the 44 transects. Two samples were collected from the north bank and two from the south bank of the Bound Brook, approximately five feet and ten feet from the edge of the water. At each location a shallow (0-6 inches) and a deep (18-24 inches) soil sample was collected. Soil samples were named as follows: The first letter designated the transect ID from the 1997 sampling event. The bank location of the sample followed the transect ID. “N” was used to designate the north bank or “S” for the south bank. The following letter indicated the depth of the sample, either “S” for shallow (0-6 inches) or “D” for deep (18-24 inches). Finally, a number symbolizing the distance from the edge of the stream followed (“1” was used to indicate five feet from the bank edge or “2” for ten feet from the bank edge). Field duplicate samples were named using the sample ID followed by an “A” at the end. At some sample locations it was not possible to reach the target depth of 18-24 inches due to resistance or an elevated water table due to the proximity of the Bound Brook. At these locations, RST 2 collected the deepest achievable 6-inch interval.

Soil samples were collected as follows. Shallow soil samples were collected by hand using dedicated plastic scoops. The sample was transferred into dedicated aluminum pans where rocks and

other debris were removed. Then, the sample was homogenized and placed into an 8oz. glass jar. Following collection of the surface samples, either decontaminated augers or dedicated 36-inch plastic liners were used to collect the deep samples. Deep samples were reached by using a decontaminated stainless steel auger, to advance each borehole to a depth of 18 inches below grade. A second decontaminated stainless steel auger was then used to collect the 18-24 inch interval of soil. Rocks and other debris were removed from the sample before the sample was homogenized in a dedicated aluminum pan and then placed into an 8 oz. glass jar. In Reach 1, 36-inch plastic liners were used to collect the deep soil samples where higher groundwater levels prevented the use of augers. Unlike Reaches 2, 3, and 4, the soils in Reach 1 contained finer soils that did not contain as many gravel deposits. This allowed for the use of the plastic liners. The sample was removed from the liner, rocks and other debris were removed, and then the sample was homogenized in a dedicated aluminum pan before being placed into an 8oz. glass jar. Samples were collected in a downstream to upstream fashion to prevent possible cross-contamination. All soil samples were analyzed for PCBs with a 21-day written turnaround time. For more details see Table 1A, Attachment B.

## **7.2 Rinsate Blank**

Nine rinsate blank samples were collected during the sampling event. Generally, rinsate blank samples were collected each day that stainless steel augers were used to collect samples. Rinsate blanks were collected on December 11, 2007 (RB-121107), December 12, 2007 (RB-121207), December 14, 2007 (RB-121407), December 18, 2007 (RB-121807), December 19, 2007 (RB-121907), December 20, 2007 (RB-122007), January 7, 2008 (RB-010708), January 8, 2008 (RB-010808), and January 9, 2008 (RB-010908). Each rinsate blank was collected by running distilled/de-ionized water over a decontaminated auger and capturing that water in a sample container. Each sample was submitted for PCBs analysis.

## **7.3 Laboratory Information**

Each sample was submitted to a laboratory procured through EPA's Contract Laboratory Program (CLP) under Case No. 37088. For the week of December 10 – 14, 2007, Shealy Environmental Services and Mitkem Corporation were authorized to analyze the samples collected from the site. Mitkem Corporation was allotted 25 surface water samples under Modified MA1508 PCB analysis and Shealy Environmental was allotted five water (rinsate) samples and 233 soil samples for PCB analysis. For the week of December 17 – 21, 2007, 232 soil samples, five water (rinsate) samples for PCB analysis and 25 surface water samples under Modified MA1508 PCB analysis were allotted to Mitkem Corporation. Since the sampling event extended past the original two week sample period, samples were shipped to both Shealy Environmental Services and Mitkem Corporation according to the original allocations. A total of 208 soil samples and five water (rinsate) samples were shipped to Shealy Environmental Services for PCBs analysis. A total of 222 soil samples and four water (rinsate) samples were shipped to Mitkem Corporation for PCBs analysis along with 48 surface water samples for Modified MA1508 PCBs analysis.

#### **7.4 Decontamination**

All non-disposable stainless steel equipment involved in field sampling activities was decontaminated in accordance to EPA/ERT SOP# 2006. Following the dry removal of adhering soil to the greatest practical extent, decontamination was conducted by (1) Alconox detergent and potable water scrub; (2) Potable water rinse; (3) Distilled water rinse; (4) Hexane rinse; (5) Air Dry; (6) Distilled water rinse; (7) Air dry; (8) Cover with new, clean aluminum foil to avoid cross contamination. Since weather conditions were not always favorable, it was not possible to fully air dry the equipment. All decontamination fluids were stored in two, 55-gallon steel drums and disposed of by the United States Army Corp. of Engineers (USACE) as part of the ongoing remedial action.

#### **7.5 Sample Collection Dates**

Reach 4 surface water samples were collected on December 10, 2007. Reach 4 soil and sediment samples were collected from December 11 to 13, 2007. Reach 3 surface water samples were collected on December 13, 2007. Reach 3 soil and sediment samples were collected from December 13 to 18, 2007. Reach 2 surface water samples were collected on December 19, 2007. Reach 2 soil and sediment samples were collected on December 19 and 20, 2007. Reach 1 surface water samples were collected on December 27, 2007. Reach 1 soil and sediment samples were collected from January 7 to 9, 2008.

There were multiple days that sampling operations were suspended or sampling was not conducted due to weather or on-site conditions. On December 14, 2007, sampling operations were suspended due to unsafe conditions in and around the Bound Brook that were a result of poor weather. These conditions were the same reason why samples were not collected on December 17, 2007. Sampling operations were suspended again from December 27 through January 4, 2008 due to the holidays and elevated water levels which caused many sample locations to be flooded.

#### **8. Locational Data:**

RST 2 used Global Positioning System (GPS) technology to electronically document soil sample locations from the north and south banks of the Bound Brook and the locations of significant features on the Site. Locational data was not collected for surface water or sediment samples. These samples were collected from the center of the stream by aligning the collection location between the soil sample flags for each respective transect. Locational data was collected using a Trimble Geo-XT® GPS. A minimum of four satellites were used to collect location data, with a maximum positional dilution of precision (PDOP) of seven. Data were differentially corrected and projected to and displayed in Latitude / Longitude, WGS 1984 datum, decimal degrees. Refer to Table 2, Attachment D for details.

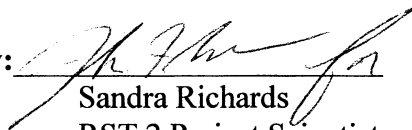

Each sample location is depicted in Figures 2 to 5 in Attachment A. It should be noted that many of the sample locations appear as if they are not in the appropriate location based on the stated scope of the sampling event. This can be largely attributed to a number of factors including the precision of the locational data, the angle at which the aerial was collected, the scale of the map, and the age of the aerial (photographed in February 2002). It should also be noted that the water level of the Bound Brook at the time the aerial was taken may not be consistent with the water levels encountered during the sampling event due to seasonal fluctuations and precipitation levels.

GPS was also used to navigate to and mark the projected sample locations. Sample locations were generated using a geo-referenced aerial of the Bound Brook and the estimated sample locations from the 1997 sampling event. Sample locations for Reaches 2, 3, and 4 were identified and flagged on December 6, 2007. Reach 1 sample locations were identified and flagged on December 21, 2007.

#### **9. Removal Assessment Photographic Documentation:**

Photographic documentation of the sampling event can be found in Attachment E.

Notes:

- (Refusal - Sleeve) - Sample was collected from the listed depth using a dedicated plastic sleeve. This interval was infiltrated with shallow groundwater and required the plastic sleeve to capture a sample at that depth interval.
- (Refusal - Water) - Sample was collected from the listed depth using a stainless steel auger. In these situations, shallow groundwater that infiltrated the borehole prevented sample collection from any deeper interval.
- (Refusal) - Sample was collected from the listed depth using a stainless steel auger. In these situations, refusal due to rocks or shallow bedrock prevented sample collection from any deeper 6 inch interval.
- MS/MSD - Matrix Spike/Matrix Spike Duplicate
